

OLI

OLIpure[®]

Maximum hygiene, Maximum freshness

OLIpure is a closed-storage **system with a disinfectant that is placed inside the cistern** and with each flush releases the disinfectant into the toilet. The disinfectant is always in a **closed circuit** and never comes in contact with the water in the cistern, unlike traditional cleaning tablets that come in contact with water. This **reduces the risk of the disinfectant damaging components** in the cistern.

OLIpure creates a fresh atmosphere and provides an immediate feeling of comfort and cleanliness, without any effort.
